The Ultimate Time Machine

http://planet.infowars.com/science/the-time-machine

A Remote Viewer’s Perception of Time, and Predictions for the Next Millennium

Joseph McMoneagle is an extraordinary remote viewer, a “psychic spy,” whose experiences have given him a special insight into the nature of time and human perception. For more than seventeen years, he was a researcher and remote viewer for the top-secret Army project STARGATE. For years after that, he journeyed through time while working in a consciousness-development lab with out-of-body experience pioneer Robert A. Monroe.

McMoneagle explores the questions that philosophers have for centuries debated: Does time really exist? Do our actions today really affect our future? Can we change the past? Do we slip between alternate realities? In The Ultimate Time Machine, McMoneagle delivers new insights into these mysteries, including:

- First-hand information – including transcripts from lab sessions – on the origins of humanity, the crucifixion of Jesus Christ, and the building of the Egyptian pyramids.

- Provocative suggestions about the nature of time, creation, and a constantly changing past.

- A detailed picture of our immediate future through the year 2075.

- More than 150 very explicit predictions on world population, aging, religious fragmentation, lifestyle changes, technological developments, and dozens of major changes to laws, customs, and practices – all within a positive and constructive framework.
A vision of the year 3000, comprising a test of what the author calls the “Verne Effect” – our ability to create and manipulate our future.

**Part III – THE NEXT ONE HUNDRED YEARS**

**Ethnic Groups**

“A good example of nonnegotiation would be what is now called ethnic cleansing! ... However, as distasteful as it may be, it represents something that is very real and very dangerous.”

**2010-2015 C.E.**

There will be significant problems at the border areas of the United States and Mexico – specifically San Diego/Tijuana, and Juarez/El Paso. As a result, Mexico and the United States will enter into an open border treaty that will go into effect in conjunction with a similar Canadian/American treaty sometime near 2020-2022 C.E.

The opening for this treaty will occur when all three countries have agreed to a common effort toward adopting both a common currency as well as equalization of workers/unions rights/benefits. The agreement will be initiated, but full commonality will not take place until approximately 2030-2035 C.E.

**2006-2008 C.E.**

Algeria will take exception to border issues with Tunisia, which will invite the intervention of Libya into both their affairs by the year 2010 C.E. Efforts to solve this dilemma will fail for a period of nearly fifteen years, during which it will spread to civil unrest within Libya, eventually erupting into civil war.

**2009-2012 C.E.**

Problems will erupt initially between the governments of Afghanistan and Tadzhikistan, and will quickly spread first to Uzbekistan, then extreme northern Pakistan. By 2012 C.E., the Himachal Pradesh and Punjab areas of extreme northern India will be involved. (This will probably not be a military problem, but it will certainly involve substantial civilian unrest throughout these regions.)
2010-2012 C.E.

Islands north of the Torres Strait will be deeded by Australia to Papau New Guinea... people of the world... will have to begin to recognize that retaining such tribal affiliations and protecting the tribal culture is OK, but it cannot be done at the expense of someone else.

Men and Women

By 2005-2008 C.E., changes in the attitudes and lifestyles of men and women will change – perhaps not radically but distinctively... a new form of clothing style will be ushered in. It will be called “utilitarian.”

Basically, it will be a new clothing design genre, consisting of a more androgynous look. This will begin with a form of jumpsuit, not unlike something you would have seen on Star Trek twenty five years ago.

By 2015 C.E., hairstyles will become more and more similar. Men and women alike will begin to share the same styling when it comes to their locks. For men, dyeing their hair will become more prevalent, as well as having the hair cut in layers. We will begin to see men with streaks of color in their hair, as well as decorative touches like glitter and the like. Initially this will be happening in places of recreation, like dance bars, discos, or nightclubs.

By 2005 C.E. Tattoos will be fully back in vogue.

A secondary business will stem from the first, in which scents will be developed to neutralize the originals – that one may walk among the living without being manipulated.

Older Population

...by the year 2006 C.E., the single greatest recognized disease (dis-ease) of the aged will be loneliness!

By 2010 C.E., there will be a new drugs for improving sexual activity.
By 2020 C.E., stringent guidelines will come into being that begin to restrict medical services that prolong life or their availability.

By 2020 C.E., assisted suicide will become a lawful choice. There will be a government program that helps alleviate the burden on insurance companies, which will be required to pay off on life insurance policies for those who chose suicide over a prolonged illness.

This will require at least two significant and landmark decisions by the U.S. Supreme Court prior to the year 2016 C.E.

By the year 2010 C.E., at least 50 percent of the current social security system will be supported privately.

These changes will not be without problems. The system will require at least two significant governmental patches (single allotments of funds from the overall budget) to survive past its development stage.

Significant Lifestyle Changes

With regard to television, a new “major network” will emerge prior to the year 2005. It will be based on the introduction of new technology that transmits a signal at least three times higher quality (pixels) than is currently seen on American televisions.

This is also the technology that will replace all other forms of information transfer using computers – at least for a short (five-year) period.

...by the year 2025. All meals will be prepackaged and frozen, cooked instantly by microwave.

Teens

Accidental pregnancy will cease to exist by the year 2050. Teenagers will be immunized against accidental pregnancy on a year-to-year basis. Those who fail to be immunized will have their pregnancies aborted, or the fetus will be removed and transferred to otherwise barren mothers.
Teens will wear tracking devices by 2020.

\*Economics\*

Internet service providers are already being targeted by major advertisement agencies for listing products. This will become a major investment area by 2005.

By 2030, advertising with paper (magazines, newspapers, catalogues, through the mail, etc.) will begin to fade rather rapidly.

Subscriptions to magazines and newspapers will begin to be handled via encrypted Internet links by 2010, a trend that will not go unnoticed by advertisers. As you sit in front of your computer in the year 2015 reading your favorite article, segmented advertising will be flashing across a strip at the upper and lower portions of the screen.

Since Global Positioning System equipment will be a standard option for most automobiles by 2012, it will take a minor modification to use it for advertising. When traveling by auto, you will be able to turn the system on and receive local broadcasts from hotels, restaurants, and other facilities, hawking their offerings, prices, and amenities.

\*Banking\*

By 2030, there will only be four major banks in America.

A large banking and insurance corporation will attempt to merge in 2008, but will be prevented from doing so by the federal government.

Banking laws will undergo a long string of changes between 2007 and 2025. These issues will primarily have to do with international trade and the specific controls surrounding the movement of large sums of money; the maximum and minimum rate of interest that banks can charge on credit and the method on which it is based; a limitation by law on actions banks can take to recoup losses to individuals—these will not apply to businesses. Accessibility to certain bank records without warrant will be expanded.
Banks will begin to accept promissory notes for organ donations as collateral for loans after 2030.

Financial

According to the current news, a common monetary system will finally be in place within Europe by the year 2000.

...defaults on loans made by, as well as to the United States will increase five to sixfold.

Inflation will rise significantly in many of the nations we do business with, as well as within our own borders. As a result, interest rates will soar, and the number of personal and small business bankruptcies will increase exponentially.

The coming war in the Middle East will add to the problem. Costs will be devastating. By 2010-2012, most Western countries will be suffering economically. Americans won’t see relief until perhaps 2075-2080.

Food Production

Water will become a major issue for farmers beginning 2008 to 2014.

Transportation

High-speed trains that travel at speeds exceeding 125 miles per hour will be built in many of the other countries around the world.

Manufacturing

By the middle of the next century, most manufacturing will be accomplished in Africa, South America, and China – least to most, respectively. North America, Europe and the Far East will be primarily consumers.

Stock Markets
Stockbrokers will always make money. If the market goes up or down, they make money selling, and they make money buying.

The markets of the world are not just large amebic and mindless entities that sort of follow the vagaries of economic climate. They are also affected in a great way by some very powerful individuals who can, at almost any time, shake them to their core. They can do this by simply raising or lowering the interest rate half a point.

...my recommendation is do not invest in the stock market.

ENVIRONMENT

Air

Air quality will continue to degrade well into the next century.

After 2025, new forms of air scrubbers will be designed to remove toxins, carbon dioxide, and other elements that are building up in the atmospheres of our homes, workspaces, and areas in which we congregate.

By 2040, disposal of the air scrubber filters will become a major problem, in some areas, the air filters will be stored with or eliminated in conjunction with nuclear waste.

A major effort at “greening” the planet will begin around 2015. The greening effort will begin in China with a single week of planting trees. This event will be the largest of its kind in the history of mankind.

Aerosols considered harmful to air quality will be slowly eliminated from products between now and the year 2060.

Biology

In 2010, flightless chickens weighing more than thirty pounds will appear on the market.
Sometime between **2022** and **2028**, a researcher will be tried in a court of law for producing a surviving human nightmare in her lab, using her own body as the breeding ground.

**Bridges**

Early in the new century, between **2008** and **2010**, a decision will be made to replace over half of the nonsuspension bridges in America.

**Buildings**

More and more recyclable materials will be going into both new and old buildings by **2010**.

Common features in the houses of **2025** will include the following:

5. All lighting will be low voltage and use long-duration bulbs.

Companies will exist completely within cyberspace.

The house will monitor [your] physical condition and automatically notify the [relevant services] when it senses distress.

**Forests**

The hunting laws in America will be nationalized by **2020**. This will result from a need to control the populations of certain animals within national forests.

In the second decade of the new millennium, a new international organization will come into existence, with the sole purpose of managing the remaining world’s rain forests.

**Highways**

Fully automated, or computer controlled highways, will be tested by **2005**. The first of these highways will be introduced for use in **2010**.

Speed limits on all state roads will be 80 MPH by **2025**. Speed limits on side or parallel service roads will never exceed 40 MPH.
Nearly all cities above 20,000 population will have cameras mounted on lights at intersections by 2020. These will be used to monitor traffic, [but] will have remote control capability for scanning adjacent sidewalks and business storefronts as well, and will be undetectable as an integral part of the streetlight.

Marine

Fishing rights will become a very major issue in the first third of the twenty-first century. There will be symposiums hosted by the United Nations before 2010, to discuss the possible partitioning of the oceans for marine resources. These meetings will initially be called to address fishing rights.

Planetary Issues

By the year 2010, astrophysicists will discover at least four or five other M-Class stars in our galaxy. We will verify that all of them possess planets within five years of their discovery.

Planet X, the tenth planet in our solar system, will be verified in the year 2015. It will have an elliptical orbit with a mean distance from the Sun of 51.50 AU, and a density approximately equal to that of Mercury.

I believe that by the year 2020, sufficiently hard proof will exist to establish that UFOs are real vehicles, and are probably piloted by intelligent beings.

Sometime after mid-century, we will establish that these vehicles are probably, for lack of a better word, time machines.

By 2075, we will have a working understanding of how we can violate time in the same way we have violated space – by simply moving through it. Movement in time will also establish that reality is not just linear, in either space or time modalities, but actually consists of an array of universal constructs that we have, until that point, ignored.

…formal contact with other intelligent beings will take place sometime between 2075 and 2077. This contact will be at their instigation, not ours.
...by 2070, we will have an operational base on the Moon, where new methods of manufacturing will be established for primarily producing exotic drugs and metal alloys for electronics. These are the beginnings of the electronic systems that will usher in our understanding of space/time travel, as well as produce unlimited supplies of power.

By 2035, we will confirm that life existed at one time on Mars, but probably did not develop there. Life arrived on a crashed vehicle from another time/space, and certainly from a much earlier age than our own.

A coherent signal will be discovered emanating from another planet, in another solar system within our galaxy by 2018.

Weather

We will know how to create clouds and produce rain in selected places of the Earth’s surface by the year 2015. This will virtually eliminate drought in narrow or selected areas.

Espionage

...since the United States government feels that using the paranormal is of no real consequence in the collection of intelligence material(s), I will confine my comments to the paranormal aspects of such intelligence gathering.

...by early 2006 American scientists will have their first tangible proof that psi functioning is actually occurring in the brain, and where it is happening.

Between 2011 and 2012, we will see biological systems being remotely affected by thought alone. This will be unique in that it will have been demonstrated on unwitting subjects, that is, subjects who do not even know they are part of the experiment. For obvious reasons, this will take place outside of the United States and, in effect, be the work of another government.

Remote bioeffects could be the most promising medical discovery in our history; it could also be the most frightening weapon.
By the year **2025**, there will be a minimum of seven countries using gifted people for paranormal intelligence-support purposes as just one more adjunct to the use of other collection methodologies.

By the year **2035**, the Central Intelligence Agency will cease to exist.

**Ethics**

The first significant change will be made by **2012**, with a change in how elections are funded. Special-interest groups will be forbidden to donate funds to people running for office.

**Law**

In effect, by **2050**, the only guns that private citizens will be allowed to possess will be “smart guns,” those that will not fire unless they are in the hands of a registered owner.

The federal government will establish a common criminal database for the use of state and local police force before **2020**. This database will be maintained by the federal justice department.

**Military**

By the year **2008**, Libya will possess nuclear [equipment] operating in underground facilities, that are capable of producing a minimum of 1.5 ounces of weapons-grade enriched U-235 per day.

Multinational agreements will be made by the year **2020** that will permit shared defensive weapons development between the United States and its allies –permanently wedding the U.S. and some of its allies to a shared defensive posture.

By the year **2060**, the United States armed forces – Army, Navy, Air Force, and Marines – will be reduced by half.

A long-range “Death Ray” will be operational by the year **2010**. It will be capable of frying hardened military targets at ranges exceeding 25 miles, and will
be track- or wheel mounted in a vehicle, or possibly hard-mounted inside a large cargo plane.

American and European infantry will be carrying “Death Ray” rifles by the year 2015, that will have a range in excess of 500 metres.

It operates by sending a variable electrical burst down a specifically constructed beam of light that has been designed and constructed to carry the electrical charge.

By 2030, the U.S. Military will be wearing camouflage that mirrors the surroundings via a weak electrical current.

By 2008, ground support helicopters will be fully stealth capable. Invisible on most radars, they will also operate almost silently at night.

By the year 2050, all U.S. Weapons systems will be designed to self-destruct without a proper code entry.

Politics

A small skirmish will be fought over a United States territory that wishes to become independent before the year 2040. This will result in statehood for that territory.

By the year 2030, there will be three major parties – the Democrats, the Republicans, and the American Freedom Party.

By 2030, most voting and campaigning will be done by Internet or interactive television.

Taxes

Because of the changes to the Social Security system, the payment of taxes will no longer be required of the individual; taxes will be paid only by the employer.
All business taxes will be filed electronically by the year 2025. There will be no personal tax filing required – not even on capital gains, or on profits from investments.

**Schools**

There will be drastic reductions in the number of students studying law and medicine.

The schools of choice by 2015 will be primarily the engineering departments, followed very closely by the information/computer science areas.

One of the major Ivy League School in the Northeast will suffer a severe shock from an exposé that will all but destroy the reputation of the school sometime between 2019 and 2022. It will involve drugs (metamphetamine), sex for money, and wife trading among the professors – to include a dean.

**War**

There is a war brewing. Within five years, 1998 to 2003, there will be a second war in northern Iraq.

**Archaeology**

The lost city of Atlantis will be found between 2012 and 2014. It lies in the [], somewhere below the [] of the city of [], [].

**Entertainment**

By the year 2006, you will be able to purchase a television/computer screen that can be molded to a wall surface.

All television will be interactive by 2020.

In 2010, most journalistic matter available electronically will be automatically encrypted with a hidden string or code. Attempts to change or modify the content of the article, manuscript, book, etc., will result in garbling the entire document,
Sex

Between 2015 and 2020, members of a medical sex clinic somewhere in Western Europe will be arrested for genetic manipulation of unborn children. Their goal? To produce a supply of hermaphrodite children to Middle Eastern brothels.

A very large push to eliminate child pornography in the Americas will begin by the year 2009. It will be kicked off by the disclosure of a large kidnapping ring that has been operating in the northeastern United States and Canada for over thirty years.

The cure for AIDS will elude science until the year 2033.

By 2010, a pill will be available to men that prevents pregnancy in women.

Computers

By 2010, a single light fiber, half the diameter of a human hair, will be capable of carrying a million GBPS (Gigabits per second), a transmission equal to approximately 100 million voice channels.

In 2035, scientists will construct a “Quantum Computer System” capable of solving “multistate” problems that otherwise would require an excessive amount of time and equipment.

Floppy disks will be replaced with hard drives using removable and rewritable disks one-third the size of today’s hard CDs by 2008. The standard RAM on the average machine will be 128 MB, with 256 MB the industrial standard on business machines (all on a single plug-in module.)

In the year 2015, most home computers will be interfacing with the Internet through a newly developed telephone relay system that will operate three times current ISDN speeds. By 2025, there will be over 600 million Internet users in homes and businesses throughout the world. By then, the Internet will be
operating mostly through up-/down-link satellites and roof-mounted dishes about the size of current home visual systems in use today – in both directions. By then, satellite systems will finally be favored over hard wires.

By 2025, all software will be voice activated and controlled, eliminating the need for keyboards and the mouse. Software will only recognize the voice of the owner and act as an integral part of the computer security and firewall system.

By 2010, most phone companies will be offering flat-rate fees for all services, which will average $60 a month regardless of use or distance.

By the end of 2050, the average home computer will have 1000 times the current processor power.

They will operate at room temperature with interlaced quad-processors of ten megabytes each. Internalized communications within the box itself will be based on optic fibers and light links.

By the year 2020, there will be a substantial rift between computer-literate and computer-illiterate social levels within American society, as well as within other countries.

Medicine

By the year 2025, forms of patient-selected suicide will be openly discussed as an option for those with terminal diseases or who are beyond the age of sixty-five.

By the year 2020, new molecular-neuro/electrical chip transmitters will be developed that will be capable of transmitting across breaks in human nerve fibers.

Nuclear Weapons

A new form of nuclear weapon will be demonstrated by the year 2030. It will use plutonium as a detonator, and antimatter stored within an electromagnetic bottle as a source of fuel.
A primitive nuclear weapon (suitcase bomb) will be taken from a terrorist organization in Western Europe sometime between 2009 and 2011. Its actual destination will have been the United States.

Power

The first operational fusion device to produce usable electricity will become operational between 2030 and 2035. Its initial energy output will be 35-40 percent above the energy required to sustain itself. It will be based on completely new technology than exists today, one that suggests a different approach to electromagnetic containment.

Spaceships

By the year 2025, we will be flying into and out of space in a plane very much like today’s Concorde.

The first spaceship to Mars will be constructed in orbit by the year 2050.
